

1 User searches Google

No Google partnership or live API crawl. You pre-publish one server-rendered, indexable URL per intent — `polst.app/c/cherkasy/pizza` — and Google indexes it like any page.

2 Google surfaces your crowd-ranked page

`ItemList` + `Restaurant` + `aggregateRating` markup earns the ranked carousel and stars. The link's URL already encodes city + category, so the click boots the app straight into this prefilled state.

3 The link opens a prefilled Polst feed
